

## [Recycling of scrap – metal scrap]

### Systematic collection

Collecting non-ferrous metal **can be compared to the collection of steel scrap**. Due to the great number of different metals and their alloys, more specialized collecting systems are necessary.

Different situations at factories and sites require specialized services to all types of customers. Our excellent team of staff closely works together with the persons in charge to create customer-oriented logistic solutions. For these solutions, a full range of skips and containers can be offered.

### Non-ferrous processing

Sorting of metals is **one of the specialities of Schaufler**. The precise sorting of the non-ferrous metals enables Schaufler to fulfill the high demand for quality from our customers. This job is **mainly performed manually** and demands skill and a lot of experience.

The individual fractions will be batched to suitable sizes for the direct use in a smelting furnace. Schaufler not only guarantees **absolute accuracy** of sorting but also **the highest degree of purity**.
